TECHNICAL SKILLS

Programming Languages & Concepts: HTML, CSS, JavaScript, Java, C++ and Python.

Knowledge of SOLID and OOP programming concepts.

Frameworks & Tools: PyQt5, SQL Server, Jira, Git.

Soft Skills: attention to detail, logical thinking, passion for efficiency, a problem-solving oriented mindset, curious and eager to learn new skills.

Languages: good written and communication skills in English.

EXPERIENCE

CONTINENTAL AUTONOMOUS MOBILITY

Aug 2023 – July 2024

Intern Junior Engineer (Remote)

Sibiu, Romania

- **Python Programming & GUI Development:** Designed and implemented a user-friendly GUI using PyQt5, improved usability and reduced setup time. This improved my Python skills and gave me practical experience applying object-oriented programming concepts such as encapsulation, inheritance, and polymorphism.
- **Testing & Debugging:** Gained experience with testing and debugging errors.
- **Collaboration & Integration:** Worked with senior engineers to integrate the GUI with backend systems, ensuring effective communication between components. This gave me the opportunity to understand full-stack workflows and software architecture.
- **Used Jira to track and manage bugs and tasks within Agile sprints.**
- **Communication & Feature Alignment:** Collaborated with the team to ensure technical solutions aligned with what the user needs and existing system requirements.

EDUCATION

Faculty of AUTOMATION COMPUTERS AND ELECTRONICS

July 2019 – July 2023

Bachelor's Degree

- **Bachelor's Degree Project: Horror Game (Unity/C#)** – Implemented a gameplay system and scene logic in C# applying OOP principles such as encapsulation, inheritance and polymorphism.
- Gained hands-on experience in C++ and Python, built a foundation in both procedural and object-oriented programming.
- Designed and developed SQL databases using Visual Studio and SQL Server, including conceptual and logical schema design.

PROJECTS

CV Presentation Website

Technologies: HTML, CSS, JavaScript

- Designed a beginner CV presentation website using HTML, CSS and JavaScript published in a GitHub repository.
- Improved page responsiveness using media queries.
- Improved the modal elements' style to make the page look neater and more modern.
- Future improvements: having a domain for the webpage, improving the style and scalability of the page, being able to receive messages from the contact form.

To-do List with Login page

Technologies: HTML, CSS, JavaScript

- A simple to-do list to put in practice HTML and CSS skills published in a GitHub repository.
- Learned JavaScript through practical implementation including adding, rendering and deleting tasks, saving the data added to the list. I also added text validation functions, event listeners and error messages.
- Added a modern and appealing style to the page.
- Future improvements: making the page scalable, adding a login and password page, creating a database for the users.
